Manufactured in Australia with BlueScope® steel

About ShapeScaper®

Established in 2020, ShapeScaper was founded with a simple purpose: to create smarter, stronger and better-looking garden edging and planters for Australian landscapes. As a proudly Australian-owned and Australian-made brand, we manufacture every component locally to ensure quality, consistency and reliability.

Our systems are built for designers, landscapers and homeowners who value precision and durability. With premium steels, modular components and refined engineering, ShapeScaper delivers clean lines, fast installation and long-term performance in Australia's harsh conditions.

Our aim is to lift the standard of landscape construction in Australia by providing products that make it easier to create beautiful outdoor spaces. We focus on solutions that save time, reduce installation complexity, and offer professionals and homeowners complete confidence in the final result.

We believe strongly in supporting Australian manufacturing, regional jobs and sustainable local supply chains. When customers choose ShapeScaper, they're choosing quality materials, ethical production and a product purpose-built for Australian landscapes.

All ShapeScaper products are backed by an industry-leading 10-year structural warranty: a reflection of the confidence we have in our materials and manufacturing. Customers can trust that their edging and planters will continue to perform, season after season, in Australia's toughest environments.

Charlie Albone

Charlie Albone

Award-winning landscape designer and television presenter Charlie Albone first discovered ShapeScaper while running his landscape construction business. His crew had long struggled with edging systems that were difficult to shape, hard to install with clean lines and time-consuming to get perfectly straight. When they tried ShapeScaper for the first time, the difference was immediate: they could achieve crisp corners, straight lines and smooth curves without the frustration or extra labour. From that point on, ShapeScaper became the edging they preferred to work with.

Charlie has since incorporated ShapeScaper into a wide range of residential landscapes and high-profile projects, including his Gold-winning Melbourne International Flower and Garden Show. The product's strength, flexibility and precision allowed him to build elevated beds, create flowing forms and deliver the refined finish his designs are known for. Charlie has worked extensively with our full range, adapting each system to suit the specific lines, levels, and planting styles of his projects.

In his own home garden, later featured on *Better Homes and Gardens*, Charlie used ShapeScaper to terrace rocky soil, import new planting media, elevate citrus trees, and reshape lawn areas to create softer, more inviting lines. His use of ShapeScaper products carried through his 2024 and 2025 Challenger Gardens at MIFGS, where he curved edging on-site for organic forms and used tree rings to lift statement plantings for greater impact.

From residential builds to award-winning show gardens, ShapeScaper has consistently delivered the precision and finish Charlie demands.

SHAPESCAPER® Steel Garden Edging

Proudly manufactured in Australia using BlueScope® steel

All ShapeScaper edging is supplied in standard 2400mm lengths, complete with connector plates and fasteners. Pre-drilled holes allow for fast, accurate assembly, enabling consistent installation and seamless joining across every project.

The ShapeScaper modular steel edging system is available in eight profile heights:

75mm, 100mm, 150mm, 185mm, 230mm, 290mm, 390mm and 590mm.

Lower profiles can be easily shaped on site to create smooth curves or crisp angled bends.

Material Options:

- **Weathering Steel:** Manufactured using BlueScope® REDCOR® steel, equivalent in performance to corten.
- **Galvanised Steel:** Made from BlueScope® GALVABOND®.
- **Self-healing Steel:** ZINMAG is a Zinc-Magnesium-Aluminium alloy coating applied to steel, offering 10-20x the corrosion resistance of traditional hot-dip zinc-coated steel.

Can I bend ShapeScaper edging?

SHAPESCAPER® edging is flexible and holds its shape once bent, with profiles up to 150mm easily curved or bent into corners on site. Taller profiles are best paired with our pre-made 90° corners or custom shaping service for perfect accuracy.

How deep should the edging be buried?

We recommend that the edging be buried about a third into the ground. This helps add stability and gives a cleaner look to the edging. Screws should be fitted below ground level, with rivets fitted above ground.

STAKES & BRACKETS

SHAPESCAPER® Stakes and Brackets

Manufactured in Australia with BlueScope® steel

ShapeScaper stakes and connectors are manufactured with pre-drilled holes that align perfectly with those along the edging lengths. Multiple fixing points allow for either three stakes per length or the recommended four stakes per length for long straight runs, light soils or high-traffic areas.

Lower-profile stakes, such as the 400mm ribbed stake, offer adjustable fastening heights to suit different edging profiles and required depths.

Stakes can be installed by aligning corresponding holes in the edging and secured by screwing in from the front or rear. Alternatively, stakes may be secured anywhere along the back face by driving screws through the pre-drilled stake holes.

Ensure all screws sit below soil level, with any above-ground fixings completed using the supplied rivets.

| SS780Z | 780mm L-Profile Stake | 390mm Edging | GALVABOND® | 3.0mm | 780mm | 42x40mm | \$18.00 |
| SS1180Z | 1180mm L-Profile Stake | 590mm Edging | GALVABOND® | 3.0mm | 1180mm | 42x40mm | \$24.00 |

What is the best way to drive the stake into the ground?

Smaller stakes can be driven in with a rubber mallet, while larger profiles may need a stake driver or augered holes in hard ground. Long stakes should be set in concrete with drainage gravel and bitumen coating at contact points.

What is the best way to fix edging onto rooftops and patios?

A full range of pre-made angled brackets are available for fixing edging to hard surfaces.

The pre-drilled holes suit either Dynabolts or ChemSet Anchor Studs. These stakes allow for 5mm of seep drainage along the base of the edging. Care must be taken when installing, not to compromise the water proof membrane.

PRE-MADE CORNERS

SHAPESCAPER® Edging Corners

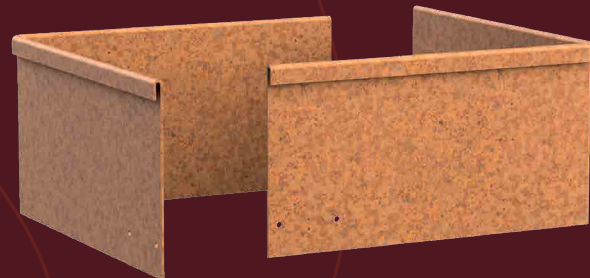

Manufactured in Australia with BlueScope® steel

Corner lengths are supplied with connector plates and screws, with pre-drilled holes for fast, accurate assembly and alignment.

ShapeScaper pre-made internal and external corners provide a clean, precise 90° transition, reducing the need to bend on-site and simplifying installation. They offer a simple, reliable solution for achieving consistent geometry, ensuring every corner sits true and maintains the sharp, professional finish ShapeScaper is known for.

Our corners are made from 2mm-thick steel for superior strength and are fully compatible with our 1.6mm and 2.5mm edging profiles, ensuring a perfect fit across the range.

While the 75mm, 100mm, 150mm and 185mm profiles can be hand shaped on site, the taller profiles are best completed using our pre-made corners or custom bending service.

PLANTER RINGS

SHAPESCAPER® Planter Rings

Manufactured in Australia with BlueScope® steel

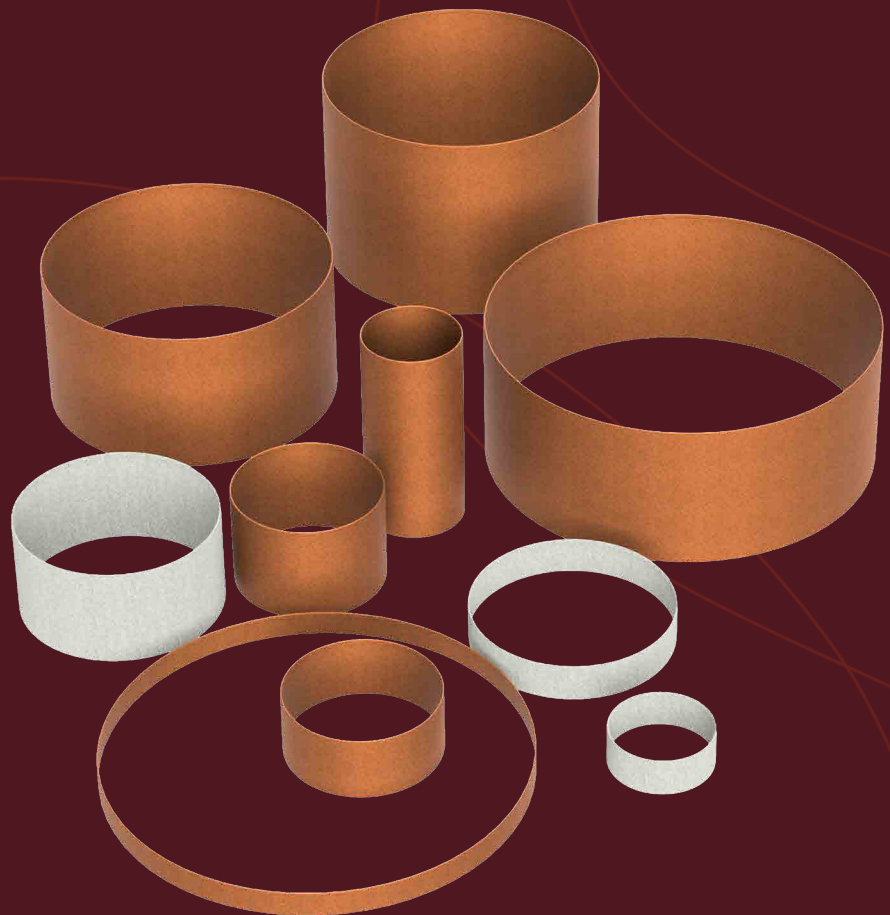

Planter rings are available in either open or closed formats (see table for defaults). All rings can be ordered in either style to suit your project.

Closed rings are supplied fully riveted, while open rings include pre-drilled holes and pre-fixed connector plates for quick alignment and easy closure on site using the supplied rivets.

ShapeScaper planter rings are manufactured from 2mm-thick steel, providing strength and long-term durability across all configurations.

Rings are available in eight profile heights:

100mm, 150mm, 185mm, 230mm, 290mm, 390mm, 590mm and 800mm.

SPECIALITY RINGS

SHAPESCAPER® Speciality Rings

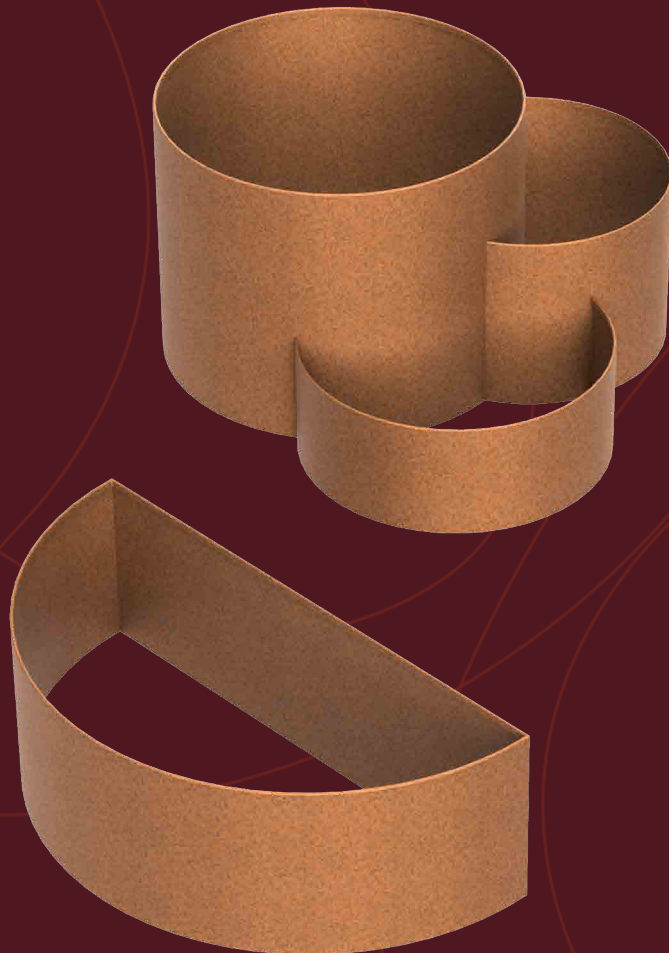

Manufactured in Australia with BlueScope® steel

ShapeScaper D-Rings

D-Rings provide a clean, modern alternative to full circles, offering a flat edge that sits neatly against walls, fences or pathways. Perfect for feature planting, architectural accents or tighter spaces, D-Rings maintain a strong, consistent shape and are manufactured from 2mm-thick steel for long-term durability. They are available in both open and closed formats for easy installation and design flexibility.

ShapeScaper Triple Rings

Triple rings are supplied fully welded and ready to install, offering exceptional strength, stability and convenience on site. Manufactured from 2mm-thick steel, they deliver a tiered, sculptural statement with no assembly required, ideal for feature planting and premium landscape builds.

HEXAGON PLANTERS

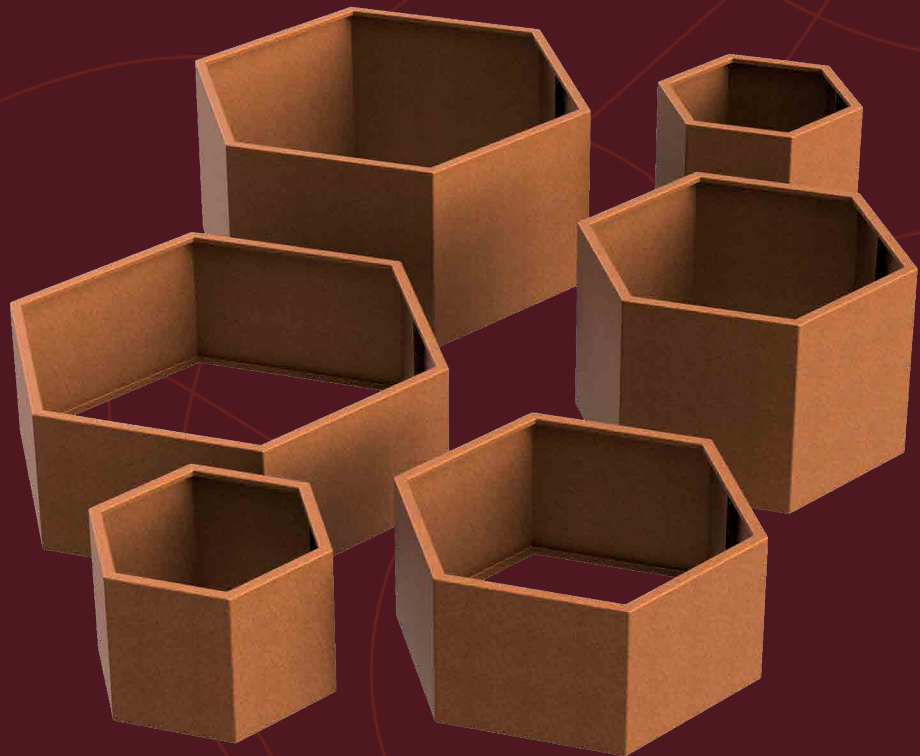

SHAPESCAPER® Hexagon Planters

Manufactured in Australia with BlueScope® steel

Hexagon planters are a striking feature allowing tessellated design in both domestic and commercial landscapes. Manufactured from 2.5mm-thick steel, they offer an organic aesthetic and long-term durability.

Each planter features smooth rounded edges and a 40mm x 20mm return rim for added strength, rigidity and safety. Hexagon planters are supplied in two halves that join easily on site, with pre-drilled alignment holes ensuring quick and accurate assembly.

Hexagon planters are available in 500mm and 700mm profile heights, and can be paired with a range of extender lengths to create custom modular configurations.

**** please note 14-21 days lead time required****

Do ShapeScaper planters come with a base?

All ShapeScaper planters are supplied without bases, as free draining planters are preferred in most applications. "Drop-in" planter bases are available for most ShapeScaper stock planters.

How does the rust form and how long will it take?

The weathering steel used in ShapeScaper products will begin forming its protective rust patina over a couple of weeks and become fully weathered between six months and two years, depending on the exposure to moisture. Please note, the use of strong acid or salt to accelerate the process will permanently damage the protective properties of weathering steel.

BOX PLANTERS

SHAPESCAPER® Box Planters

Manufactured in Australia with BlueScope® steel

ShapeScaper box planters are manufactured from 2.5mm-thick steel, giving them the structural strength required for both domestic and commercial landscape applications. Each planter is supplied in two interlocking halves that are easily joined using their pre-drilled alignment holes and the supplied screws. This ensures fast, accurate and reliable on-site assembly with a clean, seamless finish.

Each box planter can be installed as a standalone unit or customised using our modular extender lengths and 90° corner pieces, allowing box planters to be expanded or uniquely shaped.

MODULAR PLANTERS

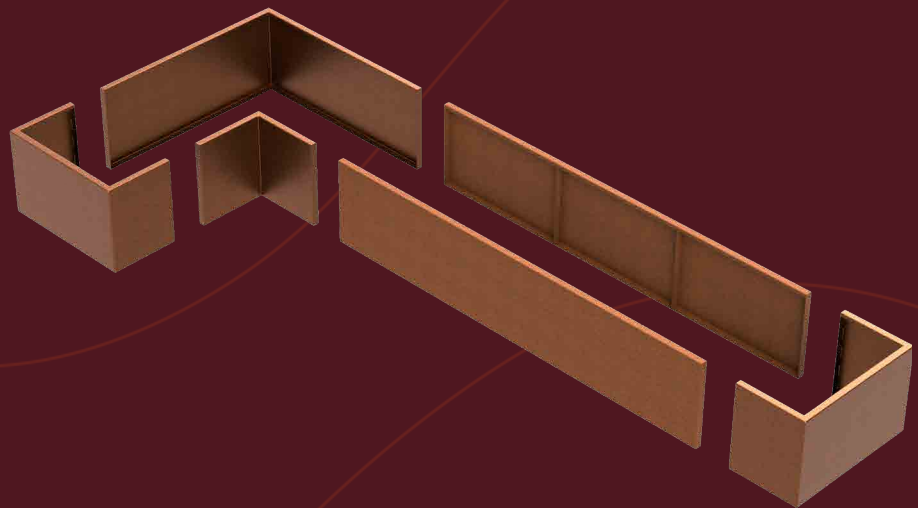

SHAPESCAPER® Modular Planters Extenders & Corners

Manufactured in Australia with BlueScope® steel

ShapeScaper planters can be customised on site using our range of straight extenders and 90° corner pieces, all available in both 500mm and 700mm profile heights. Each component features pre-drilled alignment holes for fast, accurate assembly.

Straight extenders are used to increase the overall planter length by joining the components together. The internal and external 90° corners allow you to create larger, expanded, or uniquely shaped box planter configurations.

The system is fully modular and interchangeable, meaning all extenders and corners integrate seamlessly across the range.

Can I mow/whipper snip near the edging and planters?

All ShapeScaper products are suitable to trim up against using a nylon corded whipper snipper.

No matter how deeply scratched, marks made on the surface of REDCOR® products will in time, return to the original patina. REDCOR® and ZINMAG are self healing and will continue to provide corrosion resistance and a long life even when the surface is heavily scratched with garden tools.

Galvabond surfaces may however start to corrode if the surface coating is heavily scratched.
